MiningWatch was founded in 1999 to support communities, First Nations, and environmental groups facing the impacts of mining. Over the past 20 years, MiningWatch has grown in size and expanded its network of partners. In 2019, MiningWatch rallied supporters to celebrate our work to support and defend communities affected by mining. We share a common goal: to protect the rights and welfare of communities and the environment from the negative impacts of mining.

We have worked on projects in Canada and abroad, and with communities impacted by mining, including First Nations to protect water, and ocean environments affected by mining.

MiningWatch works with many governments to protect the rights and welfare of communities and the environment from the negative impacts of mining.

We have worked on projects in Canada and abroad, and with communities impacted by mining, including First Nations to protect water, and ocean environments affected by mining.
